

Week beginning 15 December 2025

# AUSTRALIA & NEW ZEALAND WEEKLY

Analysis and forecasts for this week's key releases.

## In this week's edition:

**Economic Insight:** RBA holds cash rate at 3.6%, focused on upside risks.

**The Week That Was:** Price pressures to remain the focus.

**Focus on New Zealand:** Jingle all the way.

## For the week ahead:

**Australia:** Westpac-MI consumer sentiment and leading index, RBA's Jones and Brischetto speak.

**New Zealand:** Half-year economic and fiscal update, price indexes, REINZ house prices, Q3 GDP.

**Japan:** BoJ policy decision, Q4 Tankan survey, November CPI.

**China:** November retail trade, fixed asset investment and industrial production.

**Eurozone:** ECB policy decision, industrial production, ZEW survey of expectations.

**United Kingdom:** BOE policy decision, unemployment rate, November CPI, retail sales.

**United States:** Nonfarm payrolls, November CPI, retail sales.

Information contained in this report current as at 12 December 2025

Past performance is not a reliable indicator of future performance. The forecasts given above are predictive in character. Whilst every effort has been taken to ensure that the assumptions on which the forecasts are based are reasonable, the forecasts may be affected by incorrect assumptions or by known or unknown risks and uncertainties. The results ultimately achieved may differ substantially from these forecasts.

# RBA holds cash rate at 3.6%, focused on upside risks

Sian Fenner, Head of Business and Industry Economics  
Justin Smirk, Senior Economist

- As widely expected, the RBA kept the cash rate on hold at 3.6% in a unanimous decision. The statement struck a slightly more hawkish note but in the following media conference Governor Michele Bullock was focused on the upside risks to inflation.
- Following the media conference, the probability of a rate hike has risen. But we see this to be dependent on data over the coming months and a more likely scenario is a prolonged pause.
- Rate cuts could still be brought back to the table if our view that supply will not be a constraint and the economy can grow faster without triggering inflation is realised.
- As such, our current baseline is for two 25bp rate cuts but not until mid-2026. This would bring the cash rate to 3.1% – 125bp below its peak this monetary policy cycle.

Today's decision by the RBA to leave the cash rate unchanged at 3.6% was widely anticipated by the market and economists. It was a unanimous decision. The statement struck a slightly more hawkish note but in the following media conference, Governor Bullock indicated that the Board was focused on the upside risks to inflation.

She confirmed that at today's meeting "a rate cut was not on the table", adding that supply and demand conditions are a little tight. The potential necessary conditions for a rate hike in 2026 were also discussed as the Board believe the balance of risks for inflation have tilted to the upside.

While the Board acknowledged that some of the recent increase in underlying inflation was due to temporary factors, they still saw some signs of a broader pick-up. They also remain concerned over labour market tightness and strong growth in broader measures of wages and high unit labour costs.

They will continue to monitor these factors against a backdrop of what they believe to be a stronger pick up in private demand that could lead to capacity pressures.

But as our Chief Economist Luci Ellis recently noted in "Swing up, you won't hit a wall", the view that stronger private demand will quickly collide with supply constraints is misplaced. Indeed, we think the RBA and some other economists' projection of trend growth of 2% is too conservative. We see 2¼% or higher as realistic given population, participation, and potential productivity gains.

There is no denying that overall productivity has been very weak. But as we have previously highlighted, this in part reflects the rapid increase in the share of the care economy over recent years, which is very labour intensive and mechanically less productive than the market sector. But as private demand and the market sector become an increasing driver of economic growth, this will support an improvement in headline productivity measures. This is not just a shift in the composition of the economy. The recovery in business investment, as seen in the Q3 National Accounts, and the solid lift in private business capex intentions will see the share of business investment lift from its historical lows. With more capital per worker, we will see stronger productivity. Then there is the technological innovation and adoption, including an eventual lift from AI.

It is also worth noting that the economy is not booming. Real disposable income per person has only just returned to 2020 levels, the stimulatory impact of Stage 3 tax cuts are rolling off and with rates on hold for longer, the boost from earlier rate cuts will also fade.

Overall, we do not expect the economy to hit a hard capacity wall any time soon. If this view proves correct, the economy can grow faster without triggering further inflation, reducing the need for slightly restrictive policy.

Indeed, we expect core inflation to ease back toward, and eventually below, the mid-point of the target band by the end of 2026. Much of the recent increase reflects higher administrative prices, seasonal volatility and the removal of cost-of-living assistance. These are unlikely to be repeated to the same extent. Further out, as productivity improves and wage inflation moderates this will also support lower core inflation.

As such, our current baseline is for two more 25bp rate cuts but not until mid-2026. This would bring the policy rate to 3.1% – 125bp below its peak this monetary cycle.

Still, following Governor Bullock's comments in today's press conference, the probability of a rate hike has risen. This would be dependent on persistence of the current reacceleration in inflation. Instead, we see the risks as being more tilted to a prolonged pause. The evolution of the data over the coming months will see the RBA reassess the sustainability of inflation moving back to target and the restrictiveness of current policy settings.

# Cliff Notes: price pressures to remain the focus

Elliot Clark, Head of International Economics

Illiana Jain, Economist

Ryan Wells, Economist

The [RBA's decision](#) to leave the cash rate unchanged came as no surprise to the market, but the focus was always going to be on the RBA's take on the recent dataflow. In the event, the Monetary Policy Board conceded that part of the recent lift in underlying inflation "may be persistent", but also that some was due to "temporary factors". On activity, "private demand has strengthened, driven by both consumption and investment", and, if it were to persist, would "likely add to capacity pressures". Though the "risks to inflation have tilted to the upside" in the RBA's view, they do not appear to be in any rush to pre-emptively react to these risks, noting that "it will take a little longer to assess the persistence of inflationary pressures."

Underlying the RBA's assessment on the balance of risks is a somewhat more pessimistic view on supply capacity which, in the context of an economic upswing, begets a more hawkish tone around the inflation outlook. Our view on productivity, population and participation is more constructive, implying that the economy can handle a higher rate of growth without sparking excessive inflation. As temporary factors wash out, inflation should resume its trajectory toward the mid-point of the target range, providing scope to deliver two more rate cuts next year. If inflation dynamics take longer to normalise, the risk is that the cash rate could remain on hold for longer than our current base case.

Developments around the labour market will also be key for policy hence. The data continues to speak to a [gradual softening](#) as jobs growth across broad industry segments normalises. The November update revealed a decline in employment (-21.3k) which was 'cushioned' by an unexpected fall in the participation rate, resulting in the unemployment rate holding steady at 4.3%. We expect a bit more slack to open up over the next year, putting a lid on any upside risks to inflation stemming from the labour market.

Before moving offshore, a final note on business. The latest [NAB business survey](#) indicated that business conditions remained positive and generally steady around long-run average levels in November, notwithstanding a small decline. Business confidence was a little shakier in the month, but a more constructive picture around forward orders has allowed businesses to remain cautiously optimistic. As evidence of a sustained recovery continues to build, businesses will be able to expand capacity with a greater degree of confidence.

In the US, the FOMC cut the fed funds rate by 25bps to 3.625% at their December meeting but maintained its projection of only one further cut in 2026 and another in 2027, reaching a broadly neutral rate of 3.125% by end-2027.

This cautious approach reflects expectations of above-trend growth through 2028, supported by real income gains and AI-driven infrastructure investment, seeing the unemployment rate ease back to 4.2%.

Inflation is only forecast to decline gradually from 3.0% in 2025 to 2.0% by 2028, implying moderately restrictive policy will achieve the dual mandate, eventually. [We anticipate](#) capacity constraints and persistent inflation risks will limit further easing by the FOMC to just one more cut, which is most likely to be seen in Q1 2026 before inflation proves more persistent than the Committee currently expects. The fed funds rate on hold at 3.375% with persistent inflation risks is likely to bias up long-term yields, particularly amid elevated fiscal uncertainty.

The Bank of Canada subsequently kept rates steady at 2.25%, maintaining an accommodative stance to support the economy as it navigates excess capacity and trade uncertainty. The Governing Council remain confident inflation will remain at target with the inflation rate having held close to their target of 2.0% for over a year and excess capacity and softer wage growth likely to offset any upside risk to consumer prices from trade. The labour market has strengthened in recent months but still remains weak compared to where it was prior to the pandemic.

In China meanwhile, consumer inflation accelerated to 0.7%yr in November as producer prices deflation became more even entrenched, with prices down 2.2%yr. The rise in consumer prices reflects increases in the cost of food and gold jewellery versus demand-led inflation which there is little-to-no evidence of. Further support centred on household consumption should broaden consumer inflation through 2026.

Producer prices are unlikely to sustainably grow until capacity tightens, however. This could be a long way off. 'Anti-involution' policies champion profitability, but this does not preclude new more productive supply being invested in to replace old ineffective capacity or to meet demand for new goods and services. Price declines and profitability can therefore co-exist sustainably.

# Jingle all the way

Michael Gordon  
Senior Economist

**As is often the case, a lot of economic data has been squeezed into the days before Christmas this year. The highlight will no doubt be the September quarter GDP release on Thursday, which now looks set for a strong rebound from the shockingly weak June quarter result. But there's plenty of more timely data to pick over as well, and what we've seen so far points to the New Zealand economy regaining some momentum towards the end of the year.**

As we detailed in our [preview note](#), we've revised up our GDP forecast to a 0.9% increase for the quarter, from 0.6% previously (and 0.4% at the time of our October Economic Overview). If we're right, this will be a substantially stronger result than the general tone of the data – including those that go into our GDP Nowcast model – had been suggesting over the last few months. But recent releases have painted a much stronger picture, and in many cases these are what go directly into the GDP calculations.

Firstly, the retail trade survey at the end of last month showed a surprisingly strong 1.9% rise in volumes for the September quarter. Last week, the building work survey showed a pickup in homebuilding activity, outweighing a further decline in non-residential work. And finally, the business financial data released this week showed solid gains across a range of services sectors, especially wholesaling and professional services.

As we noted in our recent [GDP Insights](#) article, there were some identifiable factors that depressed growth in the June quarter, and will add around 0.2% to growth in the September quarter. Even so, a 0.9% reported increase would still represent a solid improvement. Our work also shows that while some excessive seasonality has crept into the quarterly GDP figures in recent times, this doesn't appear to have distorted growth rates in September quarters.

A 0.9% increase would be substantially stronger than the 0.4% that the Reserve Bank expected in its November Monetary Policy Statement, suggesting that the economy is working through its excess capacity faster than thought. While the RBNZ themselves may take this in their stride, it comes at a time when interest rate markets are already falling over themselves to price in a turnaround to OCR hikes next year. At the least, this once again points to the undesirability of having a nearly three-month gap between policy reviews over the summer period; we think it would pay for the RBNZ to provide some guidance on its thinking once people start returning to the office in January.

The usual charge that can be levelled at the GDP figures is that they are quite dated by the time of the release. However, we've also had a number of indicators relating to the December quarter that have also been positive, with more releases to come next week.

Retail card spending rose 1.2% in November. That was stronger than the 0.6% rise that we had pencilled in, although we certainly recognised the possibility of a strong result based on what we saw from [spending on Westpac-issued credit and debit cards](#). Improving household finances were a likely driver, as well as the increasing prevalence of Black Friday sales (and the difficulty of seasonally adjusting the data for shopping patterns that are still in motion).

The manufacturing PMI rose slightly to 51.4 in November, the fifth consecutive month that it has been at or above the 50 mark. While not necessarily pointing to strong growth, it's certainly an improvement over the persistently weak readings that we saw throughout last year. The equivalent services PSI will be released on Monday; unlike manufacturing, this measure has remained below 50 this year.

Net migration reached 2400 people in October, the highest since April last year. The number of departing Kiwis has continued to track down from its highs since the start of this year, though the level remains well above average. Meanwhile, short-term visitor arrivals rose for a fourth consecutive month in October, reaching a new post-Covid high. Visitor numbers are now running at around 93% of their 2019 (pre-Covid) levels.

Lastly, the weekly snapshots of filled jobs, which are provided by Stats NZ based on income tax data, have been noticeably more perky in recent weeks. The usual pre-Christmas pickup in hiring has been stronger this year than in the last few years, and jobs now look to be slightly above year-ago levels. That picture is further supported by the MBIE job advertisement index, which ticked up in November to its highest level since early 2024. The Christmas/New Year break means that we won't get the next Monthly Employment Indicator until 14 January, but with the way that the weekly figures are tracking, we should see a strong lift in November after several months of essentially flat outturns.

It's a packed schedule for local data and events next week. In addition to the GDP release on Thursday, the things to watch are:

- **The latest monthly releases for selected consumer prices, house prices and sales, and business confidence. See our preview boxes for more details.**

- The last GlobalDairyTrade auction of the year will be held on Wednesday morning, with futures markets suggesting another fall of around 4% in whole milk powder prices. A surge in global milk production this year is putting downward pressure on prices – something that we made an allowance for in our forecast of a \$9.30/kg farmgate milk price for this season.
- The Westpac-McDermott Miller consumer confidence index for the December quarter will be released on Wednesday (with the ANZ monthly confidence survey to follow on Friday). Consumers have remained relatively downbeat so far this year, with cost-of-living pressures an ongoing concern.
- The RBNZ will announce the results of its bank capital review on Wednesday. In August the RBNZ began consulting on two options that would modestly reduce capital requirements from the levels that were set in its 2019 review.

Finally, on Tuesday we get the release of the Treasury's Half-Year Economic and Financial Update (HYEFU). The HYEFU will provide an update on the state of the Government's books, while the accompanying Budget Policy Statement will outline the Government's priorities for Budget 2026.

As we [discussed in our preview](#), the deficit for the 2024/25 fiscal year was smaller than forecast in Budget 2025, especially in cash terms, providing a positive starting point for this year's funding needs. Since then, outcomes over the first four months of the 2025/26 fiscal year have been mixed relative to Budget forecasts. The operating deficit (OBEGALx) is slightly wider than forecast due to a small tax shortfall, but the core Crown residual cash deficit is smaller than forecast due to lower-than-expected net capital outlays. We expect that the HYEFU forecast for the full-year OBEGALx deficit in 2025/26 will slightly exceed the Budget 2025 forecast, but that the Government's funding needs will be no higher than forecast. As a result, we think it's likely that NZDM will confirm the \$38bn bond issuance programme for this year that was forecast in Budget 2025. We don't have much cause to expect sizeable revisions to the Treasury's economic and fiscal forecasts beyond the current year, and so forecast bond issuance in the outer years is also likely to be close to the Budget forecast.

## AUS: Dec Westpac-MI Consumer Sentiment Index

Dec 16, Last: 103.8

The Nov Westpac-MI Consumer Sentiment survey was extraordinary and somewhat surprising, being the first 'net positive' reading in the best part of four years. There are clearer signs that the domestic recovery is gaining momentum, and at the same time, external threats also appeared to have eased.

The latest survey is in the field over the week ending Dec 13. This will capture reactions to the RBA's decision to leave the cash rate on hold at its December meeting, where during the subsequent press conference, Governor Bullock confirmed that "a rate cut was not on the table" and that the Board was focused on the upside risks to inflation. The degree to which this could weigh on sentiment will be of great interest in the run-up to holiday high season for retail.

## Consumer Sentiment Index

## AUS: Q4 Westpac-ACCI Survey of Industrial Trends

Dec 16, Last: 48.8

The ACCI-Westpac Survey of Industrial Trends provides a timely update on Australia's manufacturing sector and insights into economy-wide trends.

Conditions in the manufacturing sector were on shaky footing moving into the second half of the year. Despite actual conditions falling short of expectations, manufacturers have remained notably optimistic on the outlook. A genuine upswing in economic activity is underway, and manufacturers are hopeful this will translate into new orders and output growth.

There are still a number of hallmark challenges facing the sector, notably around still-elevated unit cost pressures and the availability of skilled labour. How these dynamics evolve, especially in the context of the upswing, will be key.

## Westpac-ACCI Composite Indexes

Actual & Expected, Seasonally Adjusted

## AUS: Nov Westpac-MI Leading Index (%ann'd)

Dec 17, Last: 0.35

The six-month annualised growth rate in the Westpac-MI Leading Index, which indicates the likely pace of economic activity relative to trend three to nine months into the future, moved into slightly positive territory, lifting from +0.10% in Sep to +0.35% in Oct.

After oscillating around a zero reading for the past six months, the Leading Index has built up some momentum heading into year-end, and while the growth signal is not particularly strong, it is consistent with Westpac's view that activity will continue to pick up steam over the rest of this year and into next.

## Westpac-MI Leading Index

## AUS: Nov Private Sector Credit (%mth)

Dec 19, Last: 0.7, Westpac f/c: 0.7

Private sector credit rose by 0.7%<sub>mth</sub> in October, the joint highest rate in the current cycle. The main driver of this acceleration from the previous month's 0.6%<sub>mth</sub> increase was stronger business sector growth, while housing finance also firmed for a second consecutive month, rising by 0.6%<sub>mth</sub>.

House price growth remains elevated, and the government's 5% deposit scheme might be providing some additional support at the margin. As a result, we anticipate housing finance growth may tick higher to 0.7%<sub>mth</sub>, which would be the highest rate since early 2022. Business credit growth rates are typically more volatile, but a similar outcome to October's 0.8%<sub>mth</sub>, which was close to the recent average, is possible. This would leave total credit growth unchanged at 0.7%<sub>mth</sub>.

## Private sector credit growth

## NZ: Nov Selected Price Indices

Dec 16

After rising to 3%<sub>yr</sub> in the September quarter, we expect that CPI inflation will start to ease back over the coming months. October's prices update reinforced that view, and we'll be watching for further evidence that pressures are easing back in the November update. Key areas to watch relate to discretionary spending. That includes the volatile travel categories, but also areas like hospitality. Rents, the largest component of the CPI, will also warrant close attention – rental inflation has already fallen to very low levels and recent indicators point to continuing softness. There are also some upside risks, however, with continued increases in utility prices and fuel costs.

## NZ selected consumer prices

## NZ: Q4 Westpac-McDermott Miller Consumer Confidence

Dec 17, Last: 90.9

Consumer confidence nudged down slightly in September, leaving it below historic averages. That continued softness in sentiment reflected the impact of factors such as weakness in the jobs market, increases in living costs and subdued house price growth. Our latest survey was in the field in the early part of December. Since the September survey, we've seen further interest rate cuts from the RBNZ and signs that economic activity is starting to firm. However, we've continued to hear concerns about the cost of living and the jobs market.

## Consumer confidence

## NZ: Nov REINZ House Sales and Prices (%yr)

**Dec 17, Sales last: 6.4, Prices last: 0.3**

The New Zealand housing market was a little perkier in October. Sales picked up compared to previous months, even after accounting for the usual spring surge. However, sale prices remained close to flat. The RBNZ's dovish shift in its August and October policy reviews gave a fresh downward leg to fixed-term mortgage rates, helping to bring more potential buyers into the market. But with an ample supply of homes available for sale, there is still little pressure to bid prices higher at the moment.

## REINZ house sales and prices

## NZ: Q3 Current Account Balance (% of GDP)

**Dec 17, Last: -3.7, Westpac f/c: -3.4, Mkt f/c: -3.4**

The current account deficit has narrowed sharply over the past two years, thanks mostly to a large decline in the trade deficit amidst a cyclical upswing in the terms of trade and weak import demand. We expect the 12-month running deficit to have declined a little further to a three-year low of 3.4% of GDP in the September quarter. With falling dairy prices now weighing on the terms of trade and a recovering economy likely to boost demand for imports, the deficit is likely to widen somewhat over the course of 2026.

## Current Account Balance (% of GDP)

## NZ: Q3 GDP (%qtr)

**Dec 18, Last: -0.9, Westpac f/c: 0.9, Mkt f/c: 0.9**

We expect a 0.9% rise in GDP for the September quarter, with recent sectoral data releases showing surprisingly strong gains in several areas. If our forecast is correct, this would mark a continuation of the unusually high volatility in GDP that we've seen in recent times, including a sharp 0.9% fall in the previous quarter. Future data revisions may soften some of this volatility, giving a clearer picture of the underlying trend. See our preview note for more details.

## GDP improving but volatile

## NZ: Dec ANZ Business Confidence

**Dec 19, Last: 67.1**

The November business outlook survey saw a strong lift in confidence from already-high levels. More crucially, there was also a marked improvement in past performance, with a net 21% of firms reporting that activity was up on a year ago – something that's likely to have already been in motion before the RBNZ's 'circuit breaking' 50bp OCR cut in October. The December survey follows the RBNZ's shift to an on-hold stance in its late November policy review; the subsequent surge in longer-term interest rates may put a cap on firms' confidence about the year ahead, even as actual conditions continue to improve.

## Business confidence remains high

## US: Nov employment report

**Dec 16, payrolls, WBC f/c: 60k, Mkt f/c: 50k**  
**Dec 16, u/e rate, WBC f/c: 4.4%, Mkt f/c: 4.4%**

The latest employment report will provide estimates for both Oct and Nov for the establishment survey, but only Nov for the household survey. Given the impact of the shutdown, there is a high likelihood of abnormal noise in the data. As such, the multi-month trend will be the focus, with market participants closely scrutinising any evidence of a deterioration. Missing for Oct, the household survey will offer only limited value in this update. The hourly earnings data are meanwhile likely to confirm the benign but solid pace of wage growth reported by the employment cost index for the September quarter. Into 2026, labour supply is likely to remain in excess of demand, gradually building up slack.

## Forward looking indicators downbeat

New Orders, deviation from 10-year average (pts)

## US: Nov CPI (%yr)

**Dec 18, headline, WBC f/c: 3.1, Mkt f/c: 3.1**

The CPI returns for Nov after a month-long hiatus due to October's government shutdown. There is the possibility of distortions given no data was collected for Oct. The focus for the market will be any pick up in goods inflation related to US tariffs and the degree to which services disinflation may offset. Most likely is a further modest lift in goods inflation while services inflation holds at its prior pace. Within services, though shelter is likely to decelerate further in coming months, across the rest of the basket has been signs of additional momentum, likely as a result of higher cost inputs including wages and energy. In our view, capacity pressures are likely to persist through 2026, holding annual inflation wide of the FOMC's target.

## Services inflation a persistent concern

## Japan: BoJ Policy Decision (%)

Dec 19, WBC f/c: 0.75, Mkt f/c: 0.75

The decision to hike rests on whether the BoJ's policy board feels sufficiently confident that wage-driven inflation is taking hold and that will continue to do so in the year ahead. RENGO has announced its target of 'around 5.0%' wage growth, in line with last year and further emphasised achieving 1.0% real wage growth. At the same time, a mixture of fiscal stimulus and decelerating inflation should see real gains in consumption and wages. This confidence should empower the policy board to hike rates by 25bps in December. Of interest will be the BoJ's view on neutral and whether conditions warrant a more hawkish stance on the end point for policy.

## Hope on the horizon for real wages

# What to watch

	For	Data/Event	Unit	Last	Market f/c	Westpac f/c	Risk/Comment
<b>Mon 15</b>

### Things you should know

We respect your privacy: You can view the [New Zealand Privacy Policy here](#), or the Australian [Group Privacy Statement here](#). Each time someone visits our site, data is captured so that we can accurately evaluate the quality of our content and make improvements for you. We may at times use technology to capture data about you to help us to better understand you and your needs, including potentially for the purposes of assessing your individual reading habits and interests to allow us to provide suggestions regarding other reading material which may be suitable for you.

This information, unless specifically indicated otherwise, is under copyright of the Westpac Group. None of the material, nor its contents, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party without the prior written permission of the Westpac Group.

### Disclaimer

This information has been prepared by Westpac and is intended for information purposes only. It is not intended to reflect any recommendation or financial advice and investment decisions should not be based on it. This information does not constitute an offer, a solicitation of an offer, or an inducement to subscribe for, purchase or sell any financial instrument or to enter into a legally binding contract. To the extent that this information contains any general advice, it has been prepared without taking into account your objectives, financial situation or needs and before acting on it you should consider the appropriateness of the advice. Certain types of transactions, including those involving futures, options and high yield securities give rise to substantial risk and are not suitable for all investors. We recommend that you seek your own independent legal or financial advice before proceeding with any investment decision.

This information may contain material provided by third parties. While such material is published with the necessary permission none of Westpac or its related entities accepts any responsibility for the accuracy or completeness of any such material. Although we have made every effort to ensure this information is free from error, none of Westpac or its related entities warrants the accuracy, adequacy or completeness of this information, or otherwise endorses it in any way. Except where contrary to law, Westpac Group intend by this notice to exclude liability for this information. This information is subject to change without notice and none of Westpac or its related entities is under any obligation to update this information or correct any inaccuracy which may become apparent at a later date. This information may contain or incorporate by reference forward looking statements. The words “believe”, “anticipate”, “expect”, “intend”, “plan”, “predict”, “continue”, “assume”, “positioned”, “may”, “will”, “should”, “shall”, “risk” and other similar expressions that are predictions of or indicate future events and future trends identify forward-looking statements. These forward-looking statements include all matters that are not historical facts. Past performance is not a reliable indicator of future performance, nor are forecasts of future performance. Whilst every effort has been taken to ensure that the assumptions on which any forecasts are based are reasonable, the forecasts may be affected by incorrect assumptions or by known or unknown risks and uncertainties. The ultimate outcomes may differ substantially from any forecasts.

**Conflicts of Interest:** In the normal course of offering banking products and services to its clients, the Westpac Group may act in several capacities (including issuer, market maker, underwriter, distributor, swap counterparty and calculation agent) simultaneously

with respect to a financial instrument, giving rise to potential conflicts of interest which may impact the performance of a financial instrument. The Westpac Group may at any time transact or hold a position (including hedging and trading positions) for its own account or the account of a client in any financial instrument which may impact the performance of that financial instrument.

**Author(s) disclaimer and declaration:** The author(s) confirms that (a) no part of his/her compensation was, is, or will be, directly or indirectly, related to any views or (if applicable) recommendations expressed in this material; (b) this material accurately reflects his/her personal views about the financial products, companies or issuers (if applicable) and is based on sources reasonably believed to be reliable and accurate; (c) to the best of the author's knowledge, they are not in receipt of inside information and this material does not contain inside information; and (d) no other part of the Westpac Group has made any attempt to influence this material.

**Further important information regarding sustainability related content:** This material may contain statements relating to environmental, social and governance (ESG) topics. These are subject to known and unknown risks, and there are significant uncertainties, limitations, risks and assumptions in the metrics, modelling, data, scenarios, reporting and analysis on which the statements rely. In particular, these areas are rapidly evolving and maturing, and there are variations in approaches and common standards and practice, as well as uncertainty around future related policy and legislation. Some material may include information derived from publicly available sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information. There is a risk that the analysis, estimates, judgements, assumptions, views, models, scenarios or projections used may turn out to be incorrect. These risks may cause actual outcomes to differ materially from those expressed or implied. The ESG-related statements in this material do not constitute advice, nor are they guarantees or predictions of future performance, and Westpac gives no representation, warranty or assurance (including as to the quality, accuracy or completeness of the statements). You should seek your own independent advice.

### Additional country disclosures:

**Australia:** Westpac holds an Australian Financial Services Licence (No. 233714). You can access [Westpac's Financial Services Guide here](#) or request a copy from your Westpac point of contact. To the extent that this information contains any general advice, it has been prepared without taking into account your objectives, financial situation or needs and before acting on it you should consider the appropriateness of the advice.

**New Zealand:** In New Zealand, Westpac Institutional Bank refers to the brand under which products and services are provided by either Westpac (NZ division) or Westpac New Zealand Limited (company number 1763882), the New Zealand incorporated subsidiary of Westpac (“WNZL”). Any product or service made available by WNZL does not represent an offer from Westpac or any of its subsidiaries (other than WNZL). Neither Westpac nor its other subsidiaries guarantee or otherwise support the performance of WNZL in respect of any such product. WNZL is not an authorised deposit-taking institution for the purposes of Australian prudential standards. The current disclosure statements for the New Zealand branch of Westpac and WNZL can be obtained at [www.westpac.co.nz](http://www.westpac.co.nz).

**Singapore:** This material has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (as defined in the applicable Singapore laws and regulations) only. Recipients of this material in Singapore should contact Westpac Singapore Branch in respect of any matters arising from, or in connection with, this material. Westpac Singapore Branch holds a wholesale banking licence and is subject to supervision by the Monetary Authority of Singapore.

Disclaimer continues overleaf ►

**Fiji:** Unless otherwise specified, the products and services for Westpac Fiji are available from [www.westpac.com.fj](http://www.westpac.com.fj) © Westpac Banking Corporation ABN 33 007 457 141. This information does not take your personal circumstances into account and before acting on it you should consider the appropriateness of the information for your financial situation. Westpac Banking Corporation ABN 33 007 457 141 is incorporated in NSW Australia and registered as a branch in Fiji. The liability of its members is limited.

**Papua New Guinea:** Unless otherwise specified, the products and services for Westpac PNG are available from [www.westpac.com.pg](http://www.westpac.com.pg) © Westpac Banking Corporation ABN 33 007 457 141. This information does not take your personal circumstances into account and before acting on it you should consider the appropriateness of the information for your financial situation. Westpac Banking Corporation ABN 33 007 457 141 is incorporated in NSW Australia. Westpac is represented in Papua New Guinea by Westpac Bank - PNG - Limited. The liability of its members is limited.

**U.S:** Westpac operates in the United States of America as a federally licensed branch, regulated by the Office of the Comptroller of the Currency. Westpac is also registered with the US Commodity Futures Trading Commission ("CFTC") as a Swap Dealer, but is neither registered as, or affiliated with, a Futures Commission Merchant registered with the US CFTC. The services and products referenced above are not insured by the Federal Deposit Insurance Corporation ("FDIC"). Westpac Capital Markets, LLC ("WCM"), a wholly-owned subsidiary of Westpac, is a broker-dealer registered under the U.S. Securities Exchange Act of 1934 ('the Exchange Act') and member of the Financial Industry Regulatory Authority ('FINRA'). In accordance with APRA's Prudential Standard 222 'Association with Related Entities', Westpac does not stand behind WCM other than as provided for in certain legal agreements between Westpac and WCM and obligations of WCM do not represent liabilities of Westpac.

This communication is provided for distribution to U.S. institutional investors in reliance on the exemption from registration provided by Rule 15a-6 under the Exchange Act and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors in the United States. WCM is the U.S. distributor of this communication and accepts responsibility for the contents of this communication. Transactions by U.S. customers of any securities referenced herein should be effected through WCM. All disclaimers set out with respect to Westpac apply equally to WCM. If you would like to speak to someone regarding any security mentioned herein, please contact WCM on +1 212 389 1269. Investing in any non-U.S. securities or related financial instruments mentioned in this communication may present certain risks. The securities of non-U.S. issuers may not be registered with, or be subject to the regulations of, the SEC in the United States. Information on such non-U.S. securities or related financial instruments may be limited. Non-U.S. companies may not be subject to audit and reporting standards and regulatory requirements comparable to those in effect in the United States. The value of any investment or income from any securities or related derivative instruments denominated in a currency other than U.S. dollars is subject to exchange rate fluctuations that may have a positive or adverse effect on the value of or income from such securities or related derivative instruments.

The author of this communication is employed by Westpac and is not registered or qualified as a research analyst, representative, or associated person of WCM or any other U.S. broker-dealer under the rules of FINRA, any other U.S. self-regulatory organisation, or the laws, rules or regulations of any State. Unless otherwise specifically stated, the views expressed herein are solely those of the author and may differ from the information, views or analysis expressed by Westpac and/or its affiliates.

**UK:** The London branch of Westpac is authorised in the United Kingdom by the Prudential Regulation Authority (PRA) and is subject to regulation by the Financial Conduct Authority (FCA) and limited regulation by the PRA (Financial Services Register number: 124586).

The London branch of Westpac is registered at Companies House as a branch established in the United Kingdom (Branch No. BR000106). Details about the extent of the regulation of Westpac's London branch by the PRA are available from us on request.

This communication is not being made to or distributed to, and must not be passed on to, the general public in the United Kingdom. Rather, this communication is being made only to and is directed at (a) those persons falling within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "Order")); (b) those persons falling within the definition of high net worth companies, unincorporated associations etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may lawfully be communicated in accordance with the Order or (d) any persons to whom it may otherwise lawfully be made (all such persons together being referred to as "relevant persons"). Any person who is not a relevant person should not act or rely on this communication or any of its contents. In the same way, the information contained in this communication is intended for "eligible counterparties" and "professional clients" as defined by the rules of the Financial Conduct Authority and is not intended for "retail clients". Westpac expressly prohibits you from passing on the information in this communication to any third party.

**European Economic Area ("EEA"):** This material may be distributed to you by either: (i) Westpac directly, or (ii) Westpac Europe GmbH ("WEG") under a sub-licensing arrangement. WEG has not edited or otherwise modified the content of this material. WEG is authorised in Germany by the Federal Financial Supervision Authority ('BaFin') and subject to its regulation. WEG's supervisory authorities are BaFin and the German Federal Bank ('Deutsche Bundesbank'). WEG is registered with the commercial register ('Handelsregister') of the local court of Frankfurt am Main under registration number HRB 118483. In accordance with APRA's Prudential Standard 222 'Association with Related Entities', Westpac does not stand behind WEG other than as provided for in certain legal agreements (a risk transfer, sub-participation and collateral agreement) between Westpac and WEG and obligations of WEG do not represent liabilities of Westpac. Any product or service made available by WEG does not represent an offer from Westpac or any of its subsidiaries (other than WEG). All disclaimers set out with respect to Westpac apply equally to WEG.

This communication is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

This communication contains general commentary, research, and market colour. The communication does not constitute investment advice. The material may contain an 'investment recommendation' and/or 'information recommending or suggesting an investment', both as defined in Regulation (EU) No 596/2014 (including as applicable in the United Kingdom) ("MAR"). In accordance with the relevant provisions of MAR, reasonable care has been taken to ensure that the material has been objectively presented and that interests or conflicts of interest of the sender concerning the financial instruments to which that information relates have been disclosed.

Investment recommendations must be read alongside the specific disclosure which accompanies them and the general disclosure which can be found [here](#). Such disclosure fulfils certain additional information requirements of MAR and associated delegated legislation and by accepting this communication you acknowledge that you are aware of the existence of such additional disclosure and its contents.

To the extent this communication comprises an investment recommendation it is classified as non-independent research. It has not been prepared in accordance with legal requirements designed to promote the independence of investment research and therefore constitutes a marketing communication. Further, this communication is not subject to any prohibition on dealing ahead of the dissemination of investment research.
